

## Energy Information and Modelling Group Publications

Now available on-line through the Energy Information and Modelling website

<http://www.med.govt.nz/energy/info/>

### *Energy Data File* (this publication)

The *New Zealand Energy Data File* provides comprehensive statistics and supporting information on New Zealand's energy supply, demand and prices, mostly as national aggregates. It includes annual data from 1974, with quarterly data and energy balances for the more recent years. Oil and gas reserves information is also included.

It is published annually (ISSN 0111-6592) with a calendar year end focus. This edition includes data up to 2005 calendar year (with detailed electricity statistics for the 2005 March year) and in June 2007, it will include data up to 2006 calendar year. The hard copy version is available at a price of \$60 excluding GST. It is also available on-line (free of charge) including the publication's main tables in Microsoft Excel™ format at the Energy Information and Modelling website.

### *Energy Outlook*

The *New Zealand Energy Outlook* is designed to be a starting point for anyone wanting to become more informed about the energy choices New Zealand faces. The publication gives 25-year projections of New Zealand energy supply, demand, prices and greenhouse gas emissions under a variety of assumptions. In addition to projections, *Energy Outlook* provides essential background on every form of commercial energy, on each category of demand, and on the relationship of energy to climate change. The latest edition of *Energy Outlook* was released in September 2006 and covers the years 2005–2030.

The publication may be downloaded free of charge from the MED's website at [www.med.govt.nz/energy/eo/](http://www.med.govt.nz/energy/eo/). Hard copies are also available for \$90 plus postage and GST.

### *Energy Emissions*

The *New Zealand Energy Greenhouse Gas Emissions* provides detailed inventory information on emissions of carbon dioxide, methane, oxides of nitrogen and carbon monoxide from New Zealand's energy sources arising from human activities. It also includes estimates of carbon dioxide emissions from chemical processes used in industry, to provide a full estimate of total national gross emissions of carbon dioxide.

The publication appears annually (ISSN 1173-6771), with a base year of 1990. The latest edition covers the calendar years 1990 to 2005. It is available in hard copy for \$50 (excluding GST) or may be downloaded free of charge at the Energy Information and Modelling website.
