### Notes - See the Quarterly Survey webpage for further information - [www.med.govt.nz/electricity/qsdep/](http://www.med.govt.nz/electricity/qsdep/)

- Modelled customer uses 8000kWh per annum. All rates monitored are low user plans (8000kWh or less users). In most areas metering is Uncontrolled/Controlled (%60/%40) or Composite. Some variations occur.  
 - This approximates the total number of Installation Control Points (ICP's) by company and region (and includes residential, commercial and industrial consumers) based on data published by the Electricity Commission at:

<http://www.electricitycommission.govt.nz/opdev/retail/regstats/icps-retailer>

- The first retailer listed for each line area is the incumbent retailer. That is the retailer that acquired the customer base in each network area after the split in ownership between line and energy.

- Approximate national averages are obtained by weighting networks according to the number of ICP's.

\* Empower ICP's are included in Contact Energy's ICP's. Energy Direct NZ ICP's are not specified by the Electricity Commission. Neither of these retailers is included in the ICP Weighted or Incumbent time series, but are included where appropriate in the Cheapest and Dearest time series. Powershop ICP's have not been separated out for technical reasons but are less than 1% in all regions they operate.
